Savanna Burning

From action on the ground to carbon credits

About Agrinergy

A PIONEER IN CARBON AND INDIGENOUS ECONOMIC DEVELOPMENT

Agrinergy is one of the world's largest carbon developers and was founded in 2003 by Ben Atkinson and Robert Taylor.

Headquartered in Singapore with offices in the Jakarta, Bangkok, Mumbai, the UK and more recently Melbourne Agrinergy has been in developing international carbon credits under United Nation (UN) and voluntary schemes. With a global portfolio of more than 100 projects from various technologies (not industrial gases) and total generation exceeding 50 million tCO₂ it is now expanding its proven abilities to develop and sell savanna burning carbon credits for Traditional Owners, National Parks and graziers under the Carbon Farming Initiative (CFI).

Agrinergy is combining its expertise in Carbon Development with that of Simon Fjell who has over 30 years experience in developing sustainable agriculture projects both within Australia and globally. Simon is an authority on the CFI and has been called upon to present at conferences, workshops and Universities. His consultancy developed a Carbon Roadmap for Indigenous People and recently consulted to a major agri-business on the feasibility of co-developing Australian Carbon Credit Units (ACCU's) with their growers.

What we do.

We partner in developing carbon credits

FROM WORKING ON COUNTRY TO CARBON CREDITS

Agrinergy has committed to supporting the implementation of savannah fire management projects in the Northern Australia with the opportunity to generate Australian Carbon Credit Units (ACCU). We understand these projects provide an opportunity for pastoral companies to develop carbon credits while managing fire.

Pastoral companies have a long understanding of using fire planning in northern Australia to manage risks from uncontrolled wildlife events.

The next steps from towards the issue of ACCU's from traditional land management require the scientific and documentation processes that meet the requirements of the Clean Energy Regulator. Following this the credits are issued. Then optimising the value of your ACCU portfolio and negotiating a favourable sale will achieve the best outcome for your project.

Following your on ground action we can partner with your project to create carbon credits. We are able to fund and manage your project through to the issue of carbon credits and achieve the best results in selling these. We are also experienced in organising "forward sales" to enable pastoral companies to get in to the carbon business sooner rather than later.

Steps to undertaking a CFI project

Agrinergy

Our capacity

CFI SAVANNA BURNING

Agrinergy's carbon team has a proven track record with international emission reduction schemes, our technical capacity extends from project origination and due diligence, to methodology development and project documentation to approval, monitoring, reporting and credit issuance.

Through CFI Savanna Burning projects we are combining our capabilities with leading agricultural consultants and land management advisors to provide an expert service for CFI clients.

PROJECT DOCUMENTATION

In terms of services Agrinergy carbon team will assist project owners in applying to join the CFI to become a recognised offsets entity, open a registry account and become an eligible offsets project. We will use existing approved methodologies or if required create new ones. Agrinergy will also assist owners in implementing the operational part of the CFI project with the preparation of the documentation required, and keep records to support the information provided to the Administrator, throughout the project lifetime.

MONITORING AND REPORTING

Once the applicant's offsets project is up and running, the applicant will need to submit an offsets report on their project to the Administrator. An early and late dry season fire maps for every year in the baseline and reporting periods will be provided. Record keeping is important and will be used to assess the abatement that has been achieved by the project. Projects must be audited by a registered CFI auditor.

RISK MANAGEMENT & CARBON CREDIT SALES

Agrinergy's carbon advisory team is experienced in credit marketing, liaising with some of the largest compliance buyers in Australia. Our sales team can provide trading solutions and sales options in order to optimise the value of the ACCU portfolio.

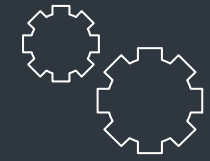

FAMILIARIZATION WORKSHOPS, CONSULTATION & TRAINING

Agrinergy is experienced in conducting familiarization information sessions to agricultural groups on what carbon finance opportunities suit their property. We have conducted numerous consultancies and conducted extensive training sessions. We are familiar with the latest science on maximizing pastoral yields through savanna burning while gaining a carbon uplift from these activities.
